From the Agronomy Desk...

As we work our way through the month of November, take a little time to analyze what it took, and what was needed to produce your crops this past season. Harvest is not complete yet, the soybean fields are mostly off and the weather has been good for corn drying . The fall hay harvest has gone fairly well and fertilizer has been applied to some of the fields. Those alfalfa stands that you plan on keeping need that plant food when they break dormancy next spring so that they can get off to a fast start.

With harvest comes fall tillage. Lime should be applied first, if needed, and then worked in. This can be done using the variable rate method or just broadcasting at a flat rate. As you empty the manure pit make sure to apply these nutrients on an as needed basis. Put it where it will do the most good for next year's crop, and incorporate it so that it stays where you put it. Soil sampling has been staying caught up to crops coming off. We still have time, so if you need sampling done, please call.

It's time to purchase or place your seed order for next year. The best discounts are happening now. We have the seed companies' entire price sheets and the supply looks good. Consider what worked last year and what didn't, when ordering.

Your Spooner Mills Agronomy Team,

MERVIN BURKHOLDER Corn Silage
